the airborne information for lateral spacing ails concept is designed to support independent
parallel approach operations to runways spaced as close as 2 500 feet this report briefly describes
the ails operational conce pt and the results of a flight test of one implementation of this concept
the focus of this flight test experiment was to validate a prior simulator study evaluating pilot
performance pilot acceptability and minimum miss distances for the rare situation in which an
aircraft on one approach intrudes into the path of an aircraft on the other approach although the
flight data set was not meant to be a statistically valid sample the trends acquired in flight
followed those of the simulator and therefore met the intent of validating the findings from the

simulator results from this study showed that the design goal mean miss distance of 1 200 feet to potential collision situations was surpassed with an actual mean miss distance of 1 859 feet
